

Northeast Science Center Collaborative

Bringing the latest research on climate change science, impacts and solutions to science centers across the Northeast.

A program of Clean Air-Cool Planet.

Meet the Scientists

Climate Change: Impacts on New England Ecosystems

hosted by

Vermont Institute of Natural Science

6565 Woodstock Road
Quechee, Vermont 05059

Wednesday, March 19, 2008

10:00am - 3:00pm

Presentations

“Life in the Clouds: Potential Effects of Climate Change on Montane Fir Forests in the Northeast”

Kent McFarland – Research Biologist, Vermont Center For Ecostudies

and

“Projected Climate Change in New England: Impact to Riparian Wetlands”

Michael Simpson – Wetlands Scientist, Antioch New England University

Meet the Scientists – is a program of the **Northeast Science Center Collaborative** that links research institutions to science centers to inform the public about climate change by relating it to where people live and the places they care about. This program introduces interpreters, educators, docents, trustees, senior managers, and the public to the research methodologies and analytic techniques that scientists use to unravel human versus natural impacts on climate.

Reserve your seat - Please register as space is limited and seats will be reserved on a first-come, first-served basis. Registration is \$15 with a lunch included. You can register and pay on line at:
https://www.cleanair-coolplanet.org/backpack06/registration_scientists.php

Directions to the program and an agenda will be e-mailed to registrants. For more information please contact Karin Jakubowski at: kjakubowski@cleanair-coolplanet.org or (203)966-5693
